Everything in Sight with Sunwatch

Fill the entire Family with Solar Energy Enthusiasm

The Dutch company Mastervolt, manufacturer of inverters and self-sufficient generating systems Mastervolt offers Sunwatch 25, a small but detailed display, with which it is possible to wirelessly request the current and past values of the PV system at any time.

With Sunwatch 25, the entire family can enjoy solar energy. Easy to operate and understand, the illuminated display answers the most important questions. Is the solar system working correctly? How much energy it has already produced is shown in kilowatt hours, the saving of ecologically harmful gases in kilograms of CO² and the current performance in watts. A touch of the button, and the values are displayed anywhere in the house on the little box, which is not much bigger than a cigarette packet and weighs just 260 grams with batteries.

A small transmitter in the control system sends the data wirelessly to Sunwatch 25. Depending on the conditions, the range can reach up to 30 metres and the signals also penetrate walls. Both the installation of the transmitter unit and set-up of the display are extremely simple.

The fun and simple observation of your own system is particularly intended for private households and visualises both the energy production and the benefits to the environment due to no carbon dioxide being produced.
