New from Mastervolt

String inverter Mastersol CS20TL

State-of-the-art Specifications

The efficiency level is record breaking: >98%. The wide range of input voltage from 200 V to 1000 V represents exceptional flexibility. In short: the new Mastersol CS20TL inverter from Mastervolt is a technical delicacy. It includes a graphical display with 365 day datalogger. And external installation using IP65 electronics goes without saying.

The two MPP trackers make the Mastersol CS20TL extremely flexible and compatible with any PV module. The use of an optional transformer is also suitable for amorphous and thin-film solutions. Its optimal cooling system provides improved efficiency and a long life.

Quick installation is a further advantage of the CS20TL. The waterproof AC plug and integrated handles help provide quick and flexible commissioning. A mounting bracket enables quick and easy wall mounting. Even maintenance is easy. The removable fan module and a removable connector strip for the communication interface are extremely helpful.

As an optional extra, Mastervolt offers a DC distribution box with integrated DC switch and string current monitoring; an optional transformer in a robust cover as well as a comprehensive range of monitoring solutions for the Mastersol CS20TL.

The CS20TL will be introduced to the market at the end of the year.
