WOLF-Garten – Premium lawns

Only the best

Lush green for the highest demands

It is the dream of every garden owner: Lush, thick green on their lawn, be it large or small, only exposed to the sun or dotted with trees. The premium lawn “Schatten & Sonne” [Shade & Sun] by WOLF-Garten, a top-class product from the company's own lawn research department, fulfils the highest demands for a dense, lush dream green.

The premium product is not called “Schatten & Sonne” for nothing. It contains the only type of grass which can tolerate both bright light and shade very well in the long-term. The high density of grass is enormous, with about 100,000 blades per square metre. As a result, the lawn surface is particularly resilient, extremely dense and robust, be it for a large garden party or the first training sessions of the future World Cup champion.

The extremely high tolerance to shading allows the green lawn to glow continuously, even in places where it would otherwise quickly become patchy, under trees and bushes for example. In addition, the special mixture creates a balance, lush and dense appearance.

Despite these special capabilities, up to 40% less grass clippings are accumulated in comparison with cheap seed. In addition, there is the WOLF-Garten germination guarantee. The “Shady” grass can be sown between May and October. The months of May and September offer ideal working conditions.

Press Release

“Schatten und Sonne” is part of the WOLF-Garten BioActive range. The seed contains a unique combination of natural active plant strengtheners. It increases the growth and formation of root mass. This ensures up to 30% faster germination in comparison with conventional mixtures. The resistance of the lawn against dryness, heat and cold is increased, the defensive forces against pests and fungal disease is reinforced. In addition, the vitality, resilience and lawn quality are increased. The “Pseudomonas Proradix” bacterium is responsible for this, as it forms a “protective space” around the plant roots, activates the plant's own defence systems and optimises the absorption of nutrients – everything for the repaired dream lawn.

Further information about on this subject can be obtained from MTD Products AG in 66129 Saarbrücken.
