### **WOLF-Garten Expert Robo Scooter 1800**

### **Pioneering lawnmower technology**

#### **Perfect cut and perfect timing**

**WOLF-Garten has for many years set new standards in lawnmower design development. The latest innovation is the Expert Robo Scooter 1800, a pre-programmed robot lawnmower that completes the work independently on a lawn area measuring up to 1,800 m<sup>2</sup>.**

The new Expert robot lawnmowers from WOLF-Garten are genuine all-rounders and can even process a large area themselves. You'll really enjoy watching the robot at work!

Mowing, mulching and even trimming jobs now take care of themselves. After entering the basic data for mowing areas and edge cutting, the battery-driven Robo Scooter 1800 works completely independently. If the battery requires recharging, the robot automatically drives to the base station. Then it sets off again when it has been repowered. That includes neat and tidy edge cutting.

Manicuring the lawn is safe and takes care of itself! The cable is easy to lay and gives every Robo Scooter its working radius. If it collides somewhere on your lawn, it simply changes direction. Does your lawn have slopes and steep areas? It masters these brilliantly! These independent garden helpers are protected from unduly harsh impact with fixed objects, incorrect use, prolonged periods of rain or theft thanks to several sensors and an alarm system.

## Presseinformation

In the edge-trimming mode the borders are cut so precisely that you can save manual and time-consuming tidying work, for instance, along walls or by trees. That's achieved by the overhanging cutting deck.

Thanks to the extensive cutting width and the latest battery technology, the Robo Scooter 1800 achieves reduced mowing times. It can process a large area of lawn without any need to recharge the batteries. Your lawn space is quickly free and you can enjoy it again straight away.

The Robo Scooter 1800 blades have two advantages. They are sturdy steel blades with a comparatively long lifespan of up to a single season. In combination with the cutting height adjustment, it's no trouble to cut even longer grass, for instance, after returning from holiday or at the start of the season. There is no need for a conventional mower. So you not only save space in your garage, but also money!

To ensure your children's safety and prevent use by unauthorised persons, the Robo Scooter 1800 is fitted with an electronic key lock. The blades instantly stop if they are lifted or tilted. If they hit an obstacle, initially the blades and then the mower are stopped. The mowing process then re-starts in a different direction.

If the batteries are getting low, the Robo Scooter returns independently back to the base station. It seeks out the shortest route to the cable and follows this route when it returns. In this case it always chooses a different track to avoid untidy edges appearing on the lawn surface.

The blades and wheels of the Robo Scooter 1800 are attached thanks to a simple clicking system. This enables you to remove and re-attach them to complete any cleaning and maintenance jobs in just a few

## Presseinformation

simple steps. That saves time, as you can reach inaccessible areas quickly and easily.

You always have a clear overview by means of the signal module, which you can install in your home. In addition, you can switch off the Robo Scooter at the push of button if you want to enjoy your garden without disruption or to interrupt the work for other reasons.

The cutting deck is suspended from the chassis. It therefore adjusts to the terrain to be cut and achieves a wonderfully even cutting pattern without damaging the sward. The skirt guard, which safely encloses the cutting deck, also has a second function: it acts as a soundproofing device and ensures a pleasant and low noise level.

If the lawn is cut when it is wet, the grass cuttings clump together and clog up the cutting deck and the overall results deteriorate. Using the adjustable rain sensor you can select the moisture level when you want mowing to be completed. If this level is exceeded, the Robo Scooter stays at the base station. You save any tiresome cleaning jobs and the lawn surface stays in tip-top condition.

With the Robo Scooter you can also save time, as there is no need to dispose of the grass cuttings. The enclosed cutting deck and extremely high rotation speed of the blades finely cut the grass and distribute it over the lawn. The cuttings are comprised of 90 % water and this provides the sward with extra moisture.

After the mowing season, the "battery preservation system" ensures the batteries retain their long life span. When connected to the power supply, the Robo Scooter 1800 can be stored during the winter in the cellar or garage and no need to worry about overcharging, overheating or damage to the battery.
