

Press Release

Cub Cadet Zero-Turn Rider

Now with Steering Wheel for Gardeners

The RZT-S works with the patented Syncro Steer technology

Cub Cadet offers two residential Zero-Turn riders with steering wheel in its range for the upcoming lawnmower season. Equipped with powerful Kawasaki tractor engines they can cope with lawn sizes beyond 2,000 square metres. The high seat position allows the gardener a good overview.

The RZT-S from Cub Cadet comes with pioneering steering system, the patented Syncro Steer technology. Instead of two drive levers – as is usual with zero-turning circle lawnmowers, the driver uses a steering wheel. This controls both the front wheels. The drive on the rear wheels is also controlled at the same time using a sophisticated lever system. Depending on the steering wheel position, the rotational speed of the inside wheel is adjusted precisely, avoiding any wheelspin. When the steering is locked fully, the inside rear wheel rotates backwards and the ride-on mower turns on the spot (zero-turn). The gardener does not have to learn how to operate control levers. Because the front wheels are steered actively, mowing and turning on hills is effortless. The steering wheel also allows you to work more precisely and quickly. Even on difficult terrain, the mower can be operated easily and safely.

Press Release

The powerful KAWASAKI tractor engines have an output of 18 and 22 HP. Their power is reliably transmitted through the dual hydrostatic transmission.

The engine does not stall, even under the most difficult conditions. The seat of the rotary mower, 107 or 117 cm wide, is suspended. The built-in speed control provides as much comfort as the generous legroom and Cub Cadet seat with high backrest.

Selected parts, such as the cutting deck, frames and front axle are galvanised with the eCoat procedure before they are powder coated. They are passed through a bath of liquid charged with protons. The parts themselves are negatively charged, meaning an anti-corrosion layer is applied. The major advantage of this procedure is in the complete application of the protective coating, even on hard-to-reach places and difficult parts such as the welded seams, corners, cavities and others.

The special speed and discharge system saves time when used for a long period. The RZT-S is ultimately designed specifically for large areas. The mulch kit is included, while the grass catcher bag is an accessory. The optional tow hitch makes it possible to connect the accessories.

The RZT-S 42 has a KAWASAKI V twin engine with 603 cubic centimetres and 18 HP. With a 107 cm cutting width and side discharge, this model costs between 3,699.00 and 4,299.00 Euro.

The RZT-S 46 has a KAWASAKI V twin engine with 726 cubic centimetres and 22 HP. The cutting width is 117 cm. It is available for between 3,999.00 and 4,799.00 Euro.
