Cub Cadet Manual Mower

MySpeed Adjusts to the User

New Drive System regulates Speed

Cub Cadet is starting the upcoming lawnmower season with a very special innovation. Thanks to the new MySpeed drive system, the speed can be individually and easily controlled, comfortably using the handle.

The Classic series from Cub Cadet is being expanded to include two new models. The special feature here is the newly developed MySpeed drive system. It permits easy regulation of the speed using the handle. All the operator has to do is to pull back the OPC bail against the MySpeed handle, start the engine and start to walk. The MySpeed handle then automatically pivots forward and the mower moves forward simultaneously. Use of the mower is intuitive and the speed adapts individually to the user. Once the operator stops walking, the MySpeed handle will automatically pivot back and the mower's drive wheels stop rotating.

The high-quality B&S engines with Auto Choke have a 2.1 and 2.3 kW output. The unit is easy to start up using a pull start. The ergonomic handle with soft grip offers a high level of comfort. The vibration level that reaches the hand is minimal. The dual ball-bearing mounted wheels allow gentle, reliable movement and the mower is very easy to manoeuvre with its high rear wheels.
