### Weather-independent robot mower

## The great Cramer RM2000

### Can be sprayed with the hose

**Never again you will have to mow your own lawn and yet always enjoy freshly mown grass. Cramer now promises this with its RM2000 mowing robot for lawns up to 2,000 m<sup>2</sup>. This means that garden owners can always keep their lawns the length of a fluffy carpet. It is controlled via GSM and smartphone. Two optional guide cables always guide it safely home to the charging station.**

The Cramer RM2000 is so quiet that it can even work at night. The IPX5 protected body is absolutely easy to clean - simply remove the housing, spray with a garden hose and clean with a brush.

No special craftsmanship or green thumb is required for the installation. This one-time effort is completed in two to four hours, depending on the size and complexity of the garden. The perimeter wire is simply attached to the ground with the appropriate mounting plugs. After just four to six weeks it has grown into the ground and is no longer visible. The wire also protects beds or bushes, pond and swimming pool. The RM2000 detects walls and trees with the help of its collision sensors.

The Cramer RM2000 is monitored and controlled from a smartphone. All functions can be adjusted via mobile GSM even without using W-LAN. The display also shows the current position on a map using the built-in GPS in the mower. As long as you have your smartphone at hand, the app allows full control even when on holiday or in the office. Start, stop and cutting height can also be controlled on the mower in daily use without the app.

## Presseinformation

The Cramer RM2000 is IPX5 weatherproof. This means that it can withstand all weather conditions. However, to protect the grass, rain and frost sensors ensure that the mower only cut if the grass is not destroyed by the weather.

With the app you can set the times of day when the mower is allowed to work. Or you can simply switch it on and off using the onboard buttons. The low noise level - about as quiet as a TV at room volume - means the mower can be used at any time without disturbing the neighbours.

The Cramer Smartphone App prevents unauthorized use of the mower. Since it is equipped with GPS and mobile connectivity, it can be located anywhere in the world at any time.

The device is designed to work without regular service. Simply fully charge the batteries before winter and storing the mower. Like all Cramer mowing robots, the RM2000 works with brushless motors, has a cutting width of 22 centimetres and can be adjusted to a cutting height of two to six centimetres. It masters hilly, uneven terrain even on slopes.

The Cramer RM2000 lawn robot will be available from spring 2020 from motorists and specialist garden tool dealers.

Further information on this topic can be obtained from Cramer GmbH, 26789 Leer.
