Greenworks 48/24 system is the future

Twice the power in a garden battery

Power like you need it right now

For small and medium-sized gardens there is now an intelligent battery system that automatically adjusts to the required power of 48V or 24V. This revolutionary principle ranges, depending on requirements, for capacities from 48 to 288 watt hours of energy storage capacity.

In the system there are 24V devices with which the row house front garden owner can perfectly trim the two box trees and four perennials on the edge or quickly trim a small lawn edge perfectly. And can also blow leaves and twigs together afterwards.

He then inserts the same battery into the 48V lawnmower with which he cuts his 250 m² lawn behind the house. The battery recognizes the device and adjusts itself automatically.

In the system there are three 24V and ten 48V devices and three 24/48V batteries from 2Ah to 12Ah, which can be used individually, depending on the size of the property or the length of the hedges. Only one charger regulates the loading after the work is done. It knows exactly which type of battery it is currently charging.

The Greenworks 48/24 System is now available in DIY stores in Germany, Austria and Switzerland.

Further information on this topic is available from Greenworks Tools, 50996 Cologne.
