Greenworks 48/24V battery system for lawnmowers

Double power for beautiful lawns

Power like you need it right now

For small and medium-sized gardens there is now an intelligent battery system that automatically adjusts to the required power of 48V or 24V. In this revolutionary principle there are three lawnmowers of 41 cm and 46 cm cutting width with and without wheel drive. This enables them to create lawns from 275 to 900 square metres. And if you use the double battery connection of the 46 mowers, you can even cover up to 1,800 square metres in one go.

With a cutting width of 41 cm, the small 48V mower easily packs up to 800 lawns. Its 2-in-1 function allows mulching as well as collecting the grass clippings in the 50 litre collector. Thanks to its six different cutting heights, even the most demanding garden is quickly perfectly mowed.

The two 48V mowers with and without wheel drive have a double battery compartment for two batteries. This allows you to easily vary the size of the mowing area. One battery is sufficient for 900 square metres, with two you can mow 1,800 square metres of lawn in one go. Both mowers are equipped with a 55 litre collection bag.

The system includes three 48/24V batteries from 2Ah to 12Ah, which can be used individually depending on the size of the plot or the lawn. A very small 24V/2Ah battery is also available for other devices in the system. Only one charger regulates the loading after the work is done. It knows exactly which type of battery it is currently charging.

The Greenworks 48/24 system is now available in DIY stores in Germany, Austria and Switzerland.
