**New and perfect for professionals::**

### **Kress Cut & Go**

#### **The first robotic mower for continuous commercial use wins Demopark Gold Medal**

**With Cut & Go, Kress is launching the first robotic lawn mower specifically designed for commercial use in gardening and landscaping, as well as in municipal applications, contract work, and facility management. And it immediately wins the gold medal at Demopark 2025. The innovative device combines high mowing performance of 20,000 m<sup>2</sup> on a single battery charge with intelligent automation and practical design, making it the ideal solution for professionals in gardening and landscaping, municipalities, contractors, and facility management who want to maintain large green spaces efficiently and reliably.**

Whether in city parks, sports facilities, residential complexes, or commercial premises, the Cut & Go was designed for anyone who needs to maintain large lawns on a daily basis. With a powerful mowing deck and a wide cutting area, the robot ensures optimal mowing results with minimal manpower – robust enough for tough jobs, compact enough for flexible applications (dimensions: 1544 mm x 1105 mm x 835 mm, weight: 340 kg).

#### **Maximum automation, minimum effort**

Thanks to the ability to store an unlimited number of maps and save individual mowing plans, the Cut & Go can be easily prepared for a wide variety of locations. It is conveniently controlled via an app, including automatic switching between neighboring properties, without any manual reprogramming.

## Presseinformation

### Economical, safe, and efficient

Cut & Go enables staff to work more efficiently and focus on more demanding tasks that cannot necessarily be automated, such as mowing. It also increases the area covered and reduces operating costs in the long term. For contractors and service providers, this means more customer orders with less effort. At the same time, the physical strain on employees is reduced – a plus in terms of occupational safety and health.

### One device – many advantages

- Efficient maintenance of large areas
- Ideal for changing locations
- Automated navigation and control via camera, lidar, and 360-degree ultrasonic sensors
- Robust construction for continuous use
- Reduced workload for staff and improved occupational safety
- Cost reduction through lower personnel and time requirements

### Technical highlights:

- One battery charge for 8 hours of working time. This includes 5 hours of pure mowing time
- 48V battery (integrated) with a charging time of 6 hours for a 100% charge
- 20,000 m<sup>2</sup> mowing capacity with one charge
- Weight: 340 kg, cutting width: 101.6 cm, cutting height: 3.8-12.7 cm, gradient: 27%
- Extra battery boost: Optional mowing of an additional 800-1000 m<sup>2</sup> with the Kress 60V 660Wh CyberPack battery.

Kress – A brand of the POSITEC Group

Positec not only distributes its products internationally, but also operates internationally. Across time zones, languages, and continents, dedicated and unique people work on solutions that will help you complete your projects and work smarter and faster tomorrow.

The Positec Group is still owned and managed by Don Gao. Values such as sustainability, innovation, and customer focus are at the heart of all its products. In addition to innovative gardening tools and power tools, Positec's innovative strength is particularly evident in the field of lawn and mowing robots. The Kress Mission mowing and lawn robot has set a new standard in this product class.

We believe there is still much to be done and that smart solutions are needed. Innovative solutions that challenge traditional ideas and offer you real added value in the realization of your projects—whether you are a professional, a DIY enthusiast, or a keen gardener.
